SEED

A seed crystal is a tiny crystal used to grow larger crystals; they are order emerging from chaos. Seed is also the name of a series of lamps by Bec Brittain. An armature of round mitered tube defines a chaotic void, yet order is imminent as seeds appear.

Designer

Bec Brittain studied industrial design at Parsons, earned a BA in philosophy from New York University, and received an architecture degree from The Architectural Association in London. Bec draws from these different modes of thinking and making to create relationships between normally disparate elements. Her aim is to create work eliciting both an immediate sensual reaction, and a more gradual appreciation of a larger aesthetic concept. Located in New York City, Bec's studio focuses on lighting design and custom projects. Bec has been featured in Architectural Digest, The New York Times, Elle Décor and Dwell. Her work can be seen in commercial and residential projects across the world.
