

Ribbon Stool

An exercise in minimalism and tension; What defines a stool and what is the least amount of material one can use while creating a comfortable resting place? The Ribbon Stools are a combination of the side walls of brushed metal which is hand darkened and a polished top. These subtle material finishes between the sides and top give it an added depth of materiality and refinement. It could also be used as a side table.

Polished stainless steel, darkened brass with polished seat

Design: Christopher Gentner, 2015
